**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Hileman.

With regard to claim 1, Hileman (US 5,305,380) discloses a dummy terminal (Fig. 6) designed to be inserted into a connector-terminal socket originally intended to insertingly receive a connector terminal attached to an end of a signal transmission cable (column 1, lines 7-10), comprising:

a dummy terminal body (not labeled in Fig. 6, but see 9 in Fig. 1) adapted to be inserted into said connector-terminal socket; dummy-terminal engagement means (not labeled in Fig. 6, but see 11 in Fig. 5) mounted on said dummy terminal body and adapted to be engaged with a connector-terminal latching portion formed in said connector-terminal socket (see operation of rails in Fig. 4A); and dummy-terminal lock means (51) including a lock member which is mounted on said dummy terminal body and adapted to allow said dummy terminal body after being inserted into said connector-terminal socket, to be locked in its engaged state through said dummy-terminal engagement means.

With regard to claim 2, Hileman discloses that said dummy-terminal engagement means includes a flexible engagement member (15) having an engagement portion adapted to be engaged with said connector-terminal latching portion.

Art Unit: 2833

With regard to claim 4, Hileman discloses that said lock member (51) of said dummy-terminal lock means is swingably mounted on said dummy terminal body.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hileman in view of Reed et al.

With regard to claims 9 and 10, Reed et al (US 5,217,190) disclose differentiation means for differentiating between a plurality of connector-terminal sockets, wherein said differentiation means includes at least one selected from the group consisting of a color sticker, a special screw and a coloring material.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide Hileman with an identification mark, as taught by Reed et al, to conveniently operate the dummy terminal.

***Allowable Subject Matter***

Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2833

No prior art has been found to anticipate or render obvious the presently claimed subject matter. Specifically, none of the prior art of record discloses the combination of the limitations presented including the set screw disposition and operation.
